HOW IS THE TIME TO SELECT YOUR HEATER
We offer Cole's Original Hot Blast Heating Stoves with confidence; they are the best made. You have perfect control over the fire at all times, thus the coal does not waste away and you don't have to kindle a fire in the morning as with other stoves. This truly great heater is growing in popularity year after year. We expect to double our sales on them this year. Come now and make your selection. We will have your heater ready for you when you wish it put up. (R-13)

H.W. Curtis, Blackfoot, Idaho

This Cooking Range and Heater Makes Work a Pleasure

We have pleasure in calling your attention to this new improved range. You will thank us for selling you

Cole's Patented High Oven Range

if you once use it. Its scientific construction insures its success—the heat raises—and by means of the draft and flue construction—all heat circulates around the oven. This makes it a quick, economical baker.

The thin, sensitive, quick-heating lids are made of annealed (malleable) Coleized steel—the quickest heating range top you have ever used.

The two back lids heat first, leaving the two front lids for immediate use—This feature adds to the convenience of the range—You do not have to reach over vessels which are steaming hot—easy to regulate.

The air-tight base construction of this range and the Patented Hot Blast Draft gives a perfect combustion of the fuel.

The saving of fuel (soft coal) will about pay for Cole's Patented High Oven Range in 2 or 3 years use.

No stooping or lifting while baking—allow us to show and explain this range to you.

Wood Construction is Positively Best

for any man building a home in a growing community like ours because of the likely changes that will occur as our city grows and spreads out. Who knows that the resident district today will not be the business district ten or fifteen years hence. Every city of any size has passed through this same thing and those who were wise enough to build frame houses were in position to realize handsomely off the sale of their lot and still have a nice sum left after moving their home farther out—say nothing of the satisfaction of not having to live forever in a business section isolated from their friends who kept pace with the city. No matter where you build we want to talk these things over with you and tell you what we know about lumber.

"There's No Place Like Home." GEM STATE LUMBER Company

HIDES! HIDES!

Don't give your hides and pelts away. We pay 18c per lb. for dry hides. 9c for sheep pelts, 5c for clean rubber boots and shoes.

KEEP FEEDING PAILS CLEAN
Farmers Do Not Pay Enough Attention to Sanitary Condition of Vessels Used for Feed.

(By M. J. THOMPSON.)
One of our institute lecturers told us last winter that we ought to rinse out the pails after feeding the hogs, every time. This seemed to me rather far fetched at the moment, but the more I think of it the more I believe he is right. We do not pay enough attention to the sanitary condition of the vessels in which milk and other feed for the hogs is kept. The hog is a cleanly animal when it can be, and more than that pork is made for men, women and children to eat. It should be as sweet as possible and free from any disease producing element. It cannot be if we feed the hogs from vessels that contain left over feed that has become sour and rancid from heat and exposure to the air. We sold 14 pigs that averaged 170 pounds to the local butcher last winter and when he came out to look them over he remarked that they were the cleanest lot of pigs he had bought for months. He also complimented us on the clean feeding pens and their surroundings, and taking advantage of his evident satisfaction we had no trouble in getting a nice toppy price for the lot.

MAKE CONCRETE WATER TANK

One in Use at the Michigan Agricultural College is Made of Ordinary Hollow Blocks.

To water the large herd of stock kept by the Michigan agricultural college a big concrete water tank was built. This is made out of ordinary

Water Tank for Stock Farm.

hollow concrete blocks of standard size, which were cast for a silo. They are well cemented on the inside to make the tank waterproof, says the Farm and Home.

A novel arrangement on the tank is a device for heating the water in winter. A 12-inch tile extends to the center of the tank, while a 4-inch pipe leading up from this furnishes the necessary flue. A grate is fitted in the tile to allow for a suitable draft, and in the door which closes it is an opening which can be opened or shut at will. The braces which hold the top in place also serve to support the hinged doors, which are closed down in cold weather.

MONEY WEARS OUT QUICKLY

Enormous Wastage Through Circulation on British Gold and Silver Coins.

It is the duty of each loyal subject of the British crown not merely to refuse gold coin that is under a certain weight but to break it.

"Every person," the act reads, "shall, by himself or others, cut, break or deface such coin tendered to him in payment and the person tendering the same shall bear the loss."

But in spite of this act it is a risky business interfering with coins which you may suspect to be under weight or spurious. Some months ago a Grimsby woman offered a half sovereign in payment of goods to a local shopkeeper. The latter put the coin in a testing machine, and as it broke in two, refused to take it.

The coin, however, was pronounced by experts to be perfectly genuine, and when the case was taken into a court of law the shopkeeper was ordered to refund ten shillings to the customer.

Money, both gold and silver, wears out at a startling rate. It is reckoned that there is usually a hundred million pounds in gold coin in England, a very large proportion of which is locked in the strong rooms of banks. Yet of that, which is in active circulation the wastage is so great that during every twelve months seventy thousand pounds worth of gold and silver are rubbed off into fine dust.

Conference and State Fair.

Salt Lake, October 2-8. Reduced rates via Oregon Short Line. Tickets on sale from all points north of Ogden except in Montana, October 1st to 7th, inclusive, limited to October 15th. From Ogden and points south, October 2nd to 8th, inclusive, limit October 12th. See agents for rates and further particulars. S23-2t

Useless Effort.

There isn't much use asking humanity to bow before a great sacrifice when they constantly are prostrating themselves before enormous wealth.

COOP FOR HENS AND CHICKS

Common A-Shaped Affair is Easily Constructed and Can Be Made Without Any Floor.

The accompanying illustration shows a common A-shaped coop used for hen and chickens. It is quickly and easily made, says the Homestead. As shown in the illustration it is three feet wide, two feet from front to back and two feet high. The cross-

A-Shaped Coop.

pieces nailed on the front side are three inches apart. Ordinarily a coop of this kind is made with a floor, although this is not absolutely necessary. If it is not floored care must be taken to have it placed where water will not enter in case of heavy rains.

SORE NECK ON FARM HORSES

Usually Preceded by Bunch Coming on Top Where Collar Fits—Should Be Treated at Once.

A sore neck is usually preceded by a bunch coming on the top of the neck where the collar comes. If this is left and the horse worked it soon becomes a deep-seated sore, causing no end of trouble. If this bunch is noticed the first day it appears it can be entirely removed and the horse worked continually, if the lump is treated with oil of spike every night and morning. It pays to look after the welfare of the horse, as he is our main dependence during the rushing work of summer, and a horse with a sore neck cannot do his work easily nor as satisfactorily as though he were sound. It never pays to overdo a horse when the weather is excessively warm, as he is almost sure to get sore shoulders or a sore neck, no matter how well his collar fits, if his blood gets overheated. It will often pay to give a horse a pall of water between meals in very warm weather. It may mean some work; but it will pay in the long run to not neglect anything that will add to the comfort of the hard-worked animal.

COW'S HORN NURSING BOTTLE

Description of Old-Time Baby Raising That Will Make Modern Mother Shudder.

The original nursing bottle was a cow's horn, to the small end of which were sewn two pieces of leather, as a finger of a glove, and the infant drew its nourishment between the stitches. According to Dr. D. Forsyth, fifteenth century mothers used to nurse their babies for close upon three years, a duration still customary among the Japanese and Greenlanders. In the time of the Stuarts it had declined to between eighteen months and two years. In the time of the Georges it fell to one year, and now he reckoned the average as eight months.

During the Hanoverian period the practice of feeding babies artificially became somewhat common. Cow's milk was not then considered just the food for a baby deprived of its mother's milk, and the substance called "pap" was introduced through the cow's horn. "Pap" was a mixture of crust, water and sugar. A baby that thrived on it was usually one of rare constitution.

The nursing bottle with a long rubber stem succeeded the cow's horn, and by degrees the comparatively sanitary feeding bottle of today was introduced.

CURIOUS BITS OF HISTORY

By A. W. Macy.
A STRENUOUS LOVER.

When William of Normandy was a youth of nineteen he fell violently in love with his cousin Matilda, daughter of the Duke of Flanders. The young lady, however, did not reciprocate his affection with equal ardor, though she seems to have entertained a kindly feeling for him. She kept him waiting for seven long years, and would not give him a final answer. The suspense was very trying to one of William's impetuous temperament, and he finally decided to bring matters to a crisis. Meeting her in the street one day, in company with some of her friends, he seized her and threw her in the mud, with disastrous results to both her dignity and her fine clothes. So humiliated was she, so the story goes, that she consented to become his wife without further delay.

(Copyright, 1911, by Joseph B. Bowles.)

China Chilo.

Cold roast mutton should be diced and placed in a saucepan with a good pint of green peas, one head of lettuce torn into shreds, sufficient gravy to moisten and a good seasoning. Simmer for half an hour and serve with an accompaniment of boiled rice.

The D. W. Standrod & Co. BANKERS

The Business Man's Bank

THE BUSINESS MAN SHOULD HAVE A BANK THAT IS ABLE, NOT ONLY TO TAKE CARE OF HIS DEPOSITS AND COLLECTIONS SATISFACTORILY, BUT ALSO TO RENDER HIM ASSISTANCE WHEN NEEDED.
THE SERVICE OF THIS BANK IS SATISFACTORY IN ALL DEPARTMENTS, AND IT IS ABLE AT ALL TIMES TO MEET THE NEEDS OF ITS CUSTOMERS WITH SUCH LOANS AS THEY REQUIRE.
WE GIVE SPECIAL CARE TO BUSINESS MEN'S ACCOUNTS, REGARDLESS OF THEIR SIZE.
